
Costs for Product and Services

Aperture District Software License (One-time Fee)

\$2 per student for a district or consortium over 2500 enrollment; \$2.50 per student at or under 2500 enrollment—\$1500 minimum.

Unlimited users: Access to the Aperture data browser for all district employees,

Two years of free maintenance and new-feature upgrades, including documentation,

Free installation support for districts with experienced and knowledgeable technology staff, and appropriate technology infrastructure.

Note: Aperture requires a LAN, WAN, or Internet connected, stable, hardware server; and the installation of Apache (or other web server), PHP4, and MySQL. Apache, PHP, and MySQL are open source and free software servers.

Districts generally choose to have the initial user accounts, field layout, and the conversion of existing data to Aperture handled by Intelligent Solutionz. In that case, a *minimum* of \$1000 to \$5000 should be allocated for startup costs.

Additionally, \$2000 should be set aside for 2 days of onsite hands-on training.

SIS Bridge District Software License (One-time Fee)

\$500 per school—\$1500 minimum.

Note: Customization is required to address local data requirements and the structure of the existing student information system. It is recommended that a *minimum* of \$2500 be allocated for such costs.

FileMiner District Software License—Free with Aperture License

\$150 per school.

Unlimited users, and 2 years of data description templates to accommodate file changes.

Report Card on Computer (Aperture Lite) **District Software License** (One-time Fee)

\$500 per school—\$1500 minimum.

The report cards are Acrobat (pdf) forms, which can be easily modified by the district to address future changes to the layout.

Note: Since district-specific report card forms must be developed, a *minimum* of \$600 should be allocated for each report card form, if the district intends Intelligent Solutionz to do the bulk of forms creation. However, almost all the work can be done by the district, at a significant savings, with a little assistance.

Additionally, as the program is based on the Aperture engine and is designed to transfer selected values directly to a MySQL database, the initial startup costs will be similar to those for Aperture, unless Aperture is also implemented.

Software Training/Data Services

All training, and data and support services, are billed at \$100 per hour (2007/08).
